

Supplemental Figure 1. Censored Normal Alcohol Trajectories, Unadjusted

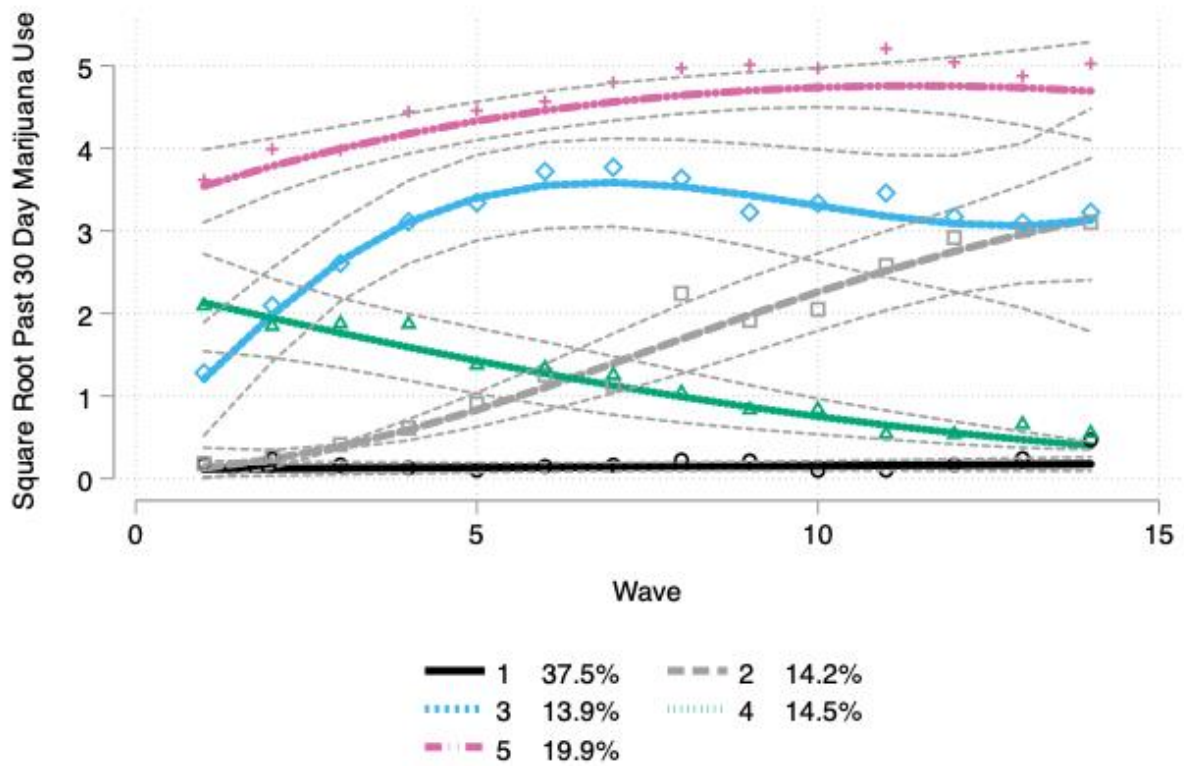

Note: Each “dot” represents the square root of the average number of days that an average individual in the trajectory group is expected to use alcohol over the preceding 30 days at each wave. Each line represents the average trajectory of alcohol use for each trajectory group. The gray lines around each line represent the confidence interval for each trajectory.

Supplemental Figure 2. ZIP Alcohol Trajectories, Unadjusted

Note: Each “dot” represents the average number of days that an average individual in the trajectory group is expected to use alcohol over the preceding 30 days at each wave. Each line represents the average trajectory of alcohol use for each trajectory group. The gray lines around each line represent the confidence interval for each trajectory.

Supplemental Figure 3. Censored Normal Marijuana Trajectories, Unadjusted

Note: Each “dot” represents the square root of the average number of days that an average individual in the trajectory group is expected to use marijuana over the preceding 30 days at each wave. Each line represents the average trajectory of marijuana use for each trajectory group. The gray lines around each line represent the confidence interval for each trajectory.
